## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an information system and method thereof having, inter alia, a processor for monitoring the information signal not associated with color to obtain signal parameter values and for converting the signal parameter values into color parameters of an illumination control signal; and a controller for communicating the illumination control signal to the input connection to control a light output of the illumination device to correspond to the color parameters of the illumination control signal so as to convey the information received in the information signal (claims 1 and 34); or wherein the signal input receives an illumination control signal representing scalar information, and wherein the processor converts the information signal into an illumination control signal and the illumination device changes color corresponding to the information signal (claims 6 and 39); or wherein the information signal input is associated with the processor; and wherein a second processor is associated with processor and said second processor converting an information signal representing scalar information to lighting control signals representing color and communicating the lighting control signals to the processor (claims 8 and 41); or a controller to receive an information signal representing numeric information not associated with color; configured to format the information signal as a lighting control having hue, saturation and intensity parameters; and to control the illumination device so as to vary at least a color of light generated by an LED illumination device in response to the information signal, wherein at least one of

Art Unit: 2821

a hue, a saturation and an intensity of the generated light represents the numeric information encoded in the received information signal (claims 14 and 47); or providing an information signal input wherein the information signal input is associated with the processor, wherein the processor converts scalar information received on the information signal input to color information provided to the signal input of the at least two controllers (claims 18 and 51). The remaining claims 2-5, 7, 10-12, 19, 20, 35-38, 40, 43-45, 52 and 53 are allowed by virtue of their dependencies from the independent claims. Hence, the examiner has allowed claims 1-8, 10-12, 14, 18-20, 34-41, 43-45, 47 and 51-53.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ninke, Patent No. 3,653,001.
